About RE:Vision Effects

RE:Vision Effects is a research and development company focused on providing innovative, advanced software to create, modify, control, and enhance moving imagery at the highest quality.

As co-founders of RE:Vision Effects, Pierre Jasmin and Peter Litwinowicz head up a team of talented computer scientists, artists, software programmers That team is focused on delivering affordable, fast and efficient, software plug-ins that enable independent editors, artists, and producers to apply all types of visual effects to video and film.

Our tools have a broad range of applications and are currently used in every phase of television, motion picture, internet and visual effects industries. The customers range from at-home editors, wedding and other live event videographers, industrial video providers to those creating high-end effects for commercials, broadcast TV and big-budget films.

Our tools are available individually or in money saving bundles. We even support multi-host floating licensing so you can run our tools anywhere you need to.
